DETAILED ACTION

Allowable Subject Matter

1. Claims 1-38 are allowed.

2. The following is an examiner's statement of reasons for allowance:

Re claims 1 and 27, the independent claim includes "a spherical body associated with a module containing an axial force measuring sensor and a data transmitter" in combination with the remaining claim limitation is not taught and/or made obvious by the prior art. See remarks, pages 2–5, received on 7/7/08. As depicted in fig. 1, Lesher, considered closest to related art, teaches a spherical body (e.g., ball 9) attached to the end of a shaft (8), the shaft being substantially smaller diameter than the diameter of the spherical body (9) (Col.1, lines 34-35). Lesher does not teach a spherical body associated with a module containing an axial force measuring sensor and a data transmitter.

Re claims 13 and 28, the independent claim includes "a spherical body associated with a module containing an axial force measuring sensor and a data transmitter; and the spherical body provided with or formed of a porous material, the spherical body also including at least one passage providing fluid communication between the porous material and a pressure sensor" in combination with the remaining claim limitation is not taught and/or made obvious by the prior art. See remarks, pages 2–5, received on 7/7/08. As depicted in fig. 1, Lesher, considered closest to related art, teaches a spherical body (e.g., ball 9) attached to the end of a shaft (8), the shaft being substantially smaller diameter than the diameter of the spherical body (9) (Col.1, lines 34-35). spherical body provided with or formed of a porous material, the spherical body also including at least one passage providing fluid communication between the porous material and a pressure sensor.

Re claim 25, the independent claim includes "an ellipsoidal body associated with a module containing an axial force measuring sensor and a data transmitter" in combination with the remaining claim limitation is not taught and/or made obvious by the prior art. See remarks, pages 2–5, received on 7/7/08. As depicted in fig. 1, Lesher, considered closest to related art, teaches a spherical body (e.g., ball 9) attached to the end of a shaft (8), the shaft being substantially smaller diameter than the diameter of the spherical body (9) (Col.1, lines 34-35). Lesher does not teach an ellipsoidal body associated with a module containing an axial force measuring sensor and a data transmitter.

Re claim 26, the independent claim includes "an ellipsoidal body associated with a module containing an axial force measuring sensor and a data transmitter; and the ellipsoidal body provided with or formed of a porous material, the ellipsoidal body also including at least one passage providing fluid communication between the porous material and a pressure sensor" in combination with the remaining claim limitation is not taught and/or made obvious by the prior art.
